# Creating a SSH tunnel using MobaxTerm on Windows

This is an example of how to setup an SSH tunnel using MobaXterm. In this way, you can open HDP/HDF Ambari from you local machine, no need to go to jump server and launch the browser.
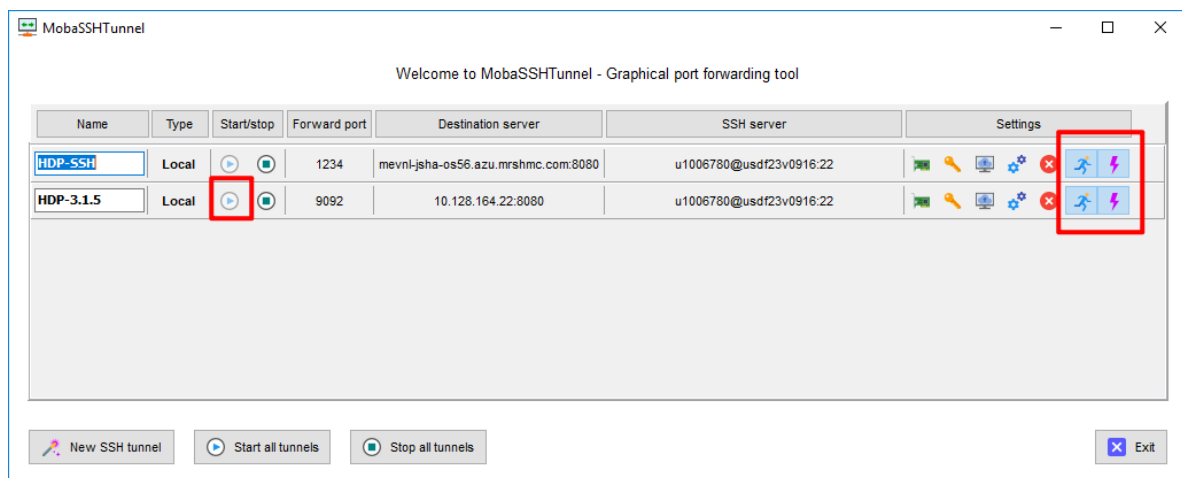

Steps Involved

Step 1: Start MobaXterm, and click on the Tunneling icon, then click on the New SSH Tunnel button:

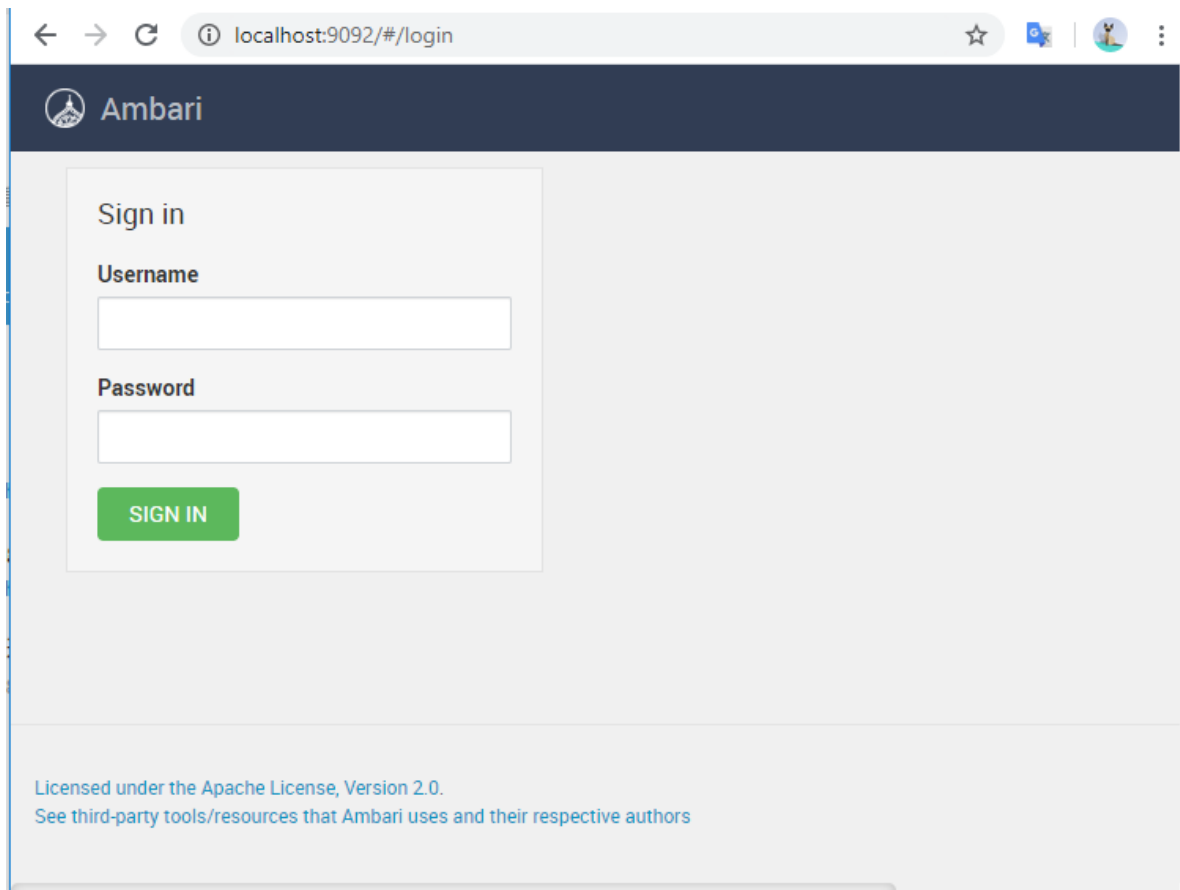

Step 2: Configure local port forwarding as shown below and Save.
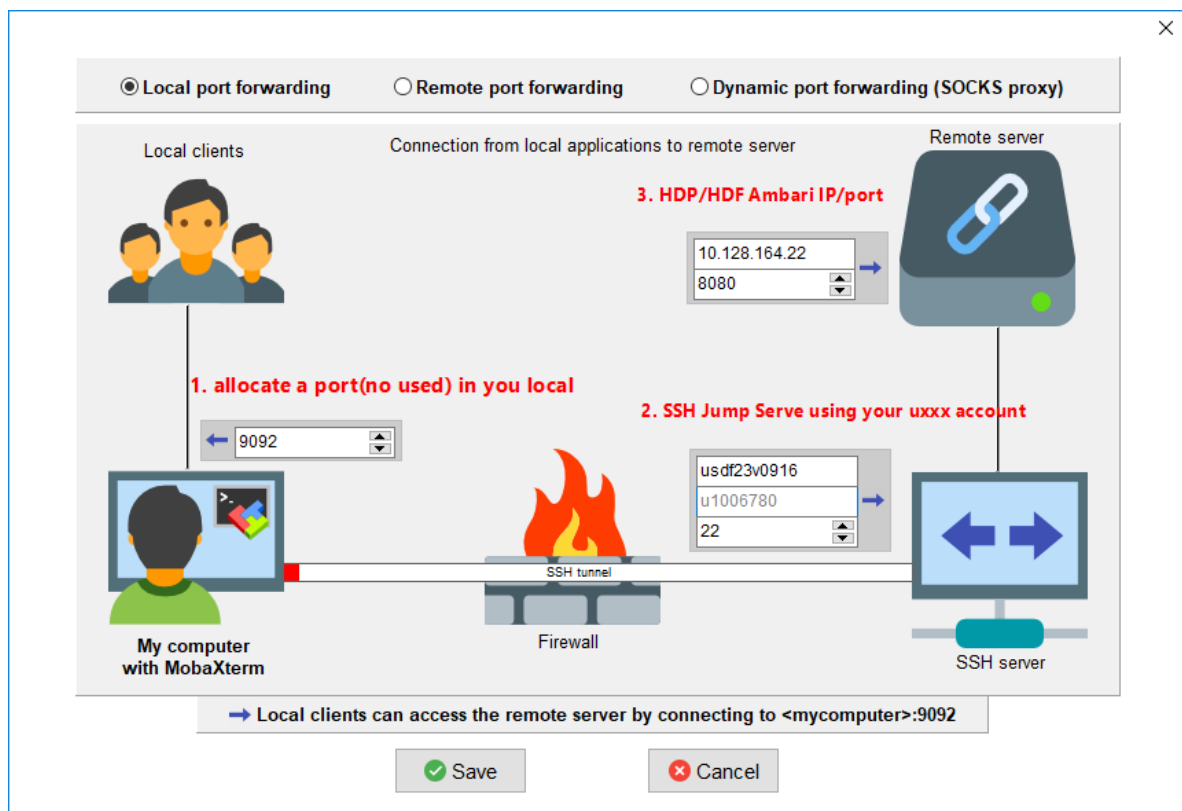

Step 3: Click on the blue arrow Start button to initiate the tunnel, and also enable "Autostart" &"Autoreconnet" under the Settings column.

Step 4: Open your local web browser, input localhost:, mine is http://localhost:9092. Once you logged in, you can use Ambari from you local now.

Note: Whenever you're going to open Ambari from your local, please make sure you start MobXterm and the tunnel status looks like
